Natural Glass Mosaics	*Recycled %Content*
Finishes	*Effects +Colours*

Aquastyle Mosaics

A selection of sensations and an expression of style, the Aquastyle collection is made up of truly avant-garde glass mosaics. The ideal ecological solution and the highest level of design.

ONIX®

Stone finishes, opals that shine with the light of rippling and tumbling waters, chromatic blends, an infinity of textures and even luminescent mosaics, which drink in daylight and shine at dusk, creating an unforgettable, radiant atmosphere.

A collection designed to lend elegance and character to swimming pools, bathrooms and other areas that involve water in their design.

Made from 98% recycled glass, an added value which enhances the quality of the product.

Available in Square, Penta and Penny formats.

This is Onix.

Pyro + Echo. Curators of the highest calibre tile ranges and stone slabs, from across the globe, sensitively sourced to inspire architects and interior designers and excite the discerning end user.

Our range is a rare portfolio of resonant beauty and unmistakeable grandeur.

Curated by time, intuition and respect, this is resounding luxury for deserving spaces.

All ONIX 98% recycled glass mosaics series are made of molten glass. Molten glass characteristics may include irregular edges and small variations in size. These characteristics are inherent to the product and to the standard production. The small size and shape variations can affect the grout joint appearance and enhance the natural aspect of these products

For collections with V2 and V3 shade variation tiles should be taken from more than one box at a time to guarantee a greater variety and alternation of colouring and patterns, for a more natural effect. Each symbol is merely indicative and must be referred to the specific relevant standard.

Please note that all ratings are average values, gathered from or based on the last 2 years of production results. It is recommended that before specification or use of a Pyro + Echo product, the client or specifier is satisfied that the tile meets the criteria or requirements of the space or area and that the technical datasheet confirms this.

For further information about certifications, technical ratings and standards, please refer to pyroandecho.com

PYRO + ECHO

TECHNICAL

BACKGROUND + SOURCING

Thanks to the perfect fusion of technology, respect for the environment and the dedication and desire of the people who work with us, our products are a blend of style, design and reliability.

It's our responsible choice to only partner with manufacturers that comply with our strict ethics and quality codes. We believe that specifying products that are sustainably produced and that meet the strictest of environmental requirements to protect the world around us, is of fundamental importance.

Therefore, we look for those that respect and believe in our strong corporate, ethical and aesthetic values, so those who choose to use Pyro + Echo's products can be assured that they are produced using safe raw materials and manufactured to the highest of standards, using state-of-the-art technologies.

As technical partners with some of Europe's largest industry suppliers, during the design, specification and installation process, Pyro + Echo can assist with design and suitability advice, specifications, substrate testing, preparation and installation advice, technical laying and setting out guides, CAD Drawings, PTV results, pendulum testing and slip resistance ratings and cleaning and maintenance information.

With over 40 years industry knowledge, our expertise in complex substrate build-ups and surface material finishes helps Pyro + Echo deliver technical solutions and ensures successful project results. We help our clients complete projects to the highest of standards.

SAMPLES + MATERIAL SPECIFICATION

Any samples, drawings, images, descriptive matter, or advertising produced by Pyro + Echo and any descriptions or illustrations contained in our catalogues, websites or brochures are produced for the sole purpose of giving an approximate idea of the products described in them. Published images and supplied samples of the products are for illustrative purposes only. Pyro + Echo are happy to provide samples upon request.

While we have made every effort to display the colours and hues accurately, we cannot guarantee that your computer's display or any printed materials of the colours and hues will accurately reflect the products. Please be aware that the actual appearance of the tiles may differ from images shown in this brochure and that it is used for information purposes only.

Despite the best efforts we can't guarantee, that published technical information does not contain deficiencies, or errors.
Pyro + Echo slabs are manufactured using selected raw natural materials fired at high temperatures. During this process particles of oxides may appear in the form of pinholes on the surface of the slabs with the appearance similar to natural stones.
Our manufacturing processes can also give a non-uniform surface shine. These features are sorted according to precise parameters by Pyro + Echo and are considered as intrinsic natural features of the product rather than a defect.

For further information about certifications, technical ratings and standards, please refer to pyroandecho.com

RETURNS

Returns will be subject to a handling charge of 20%, plus return carriage charge. Open packs cannot be returned for credit.

STOCKED ITEMS

Products that are marked with the icon are held in stock and are usually delivered within 1-2 working days, dependent on free stock levels.

All other products are considered to be on a 4 to 8 week leadtime. This timeframe will be confirmed at the point of order. This leadtime is dependent on shipping, that Pyro+Echo outsource to a third-party provider and are therefore not responsible for further delays to this.

Please note that batches of tiles may vary in colour and texture depending on the manufacturing run. Tiles for projects should be ordered in one batch, including a percentage to cover cuts and accidental breakages.

STORAGE

Products must be stored flat and in their original packaging until time of fixing. Pallets of tiles should not be stacked under any circumstances.

Any damage to the packaging may result in imperfections in the product such as cracking, pitting and staining. Pyro + Echo recommend that products are suitably covered during longer periods of storage.

All handling must be carried out by trained operatives with the correct equipment.

TECHNICAL SUPPORT

From project concept to final installation, Pyro + Echo's specification and technical teams are available to provide a comprehensive range of technical services and specialist advice.

From project concept to final installation, Pyro + Echo's specification and technical teams are available to provide a comprehensive range of technical services and specialist advice.

Pyro + Echo's industry experience, expertise and knowledge of surface material finishes such as ceramic, porcelain and natural stone, ensure the project's technical challenges are best resolved.

During the design, specification and installation stages, Pyro + Echo can provide:

- Design and suitability advice
- M40 specifications
- NBS specifications for ceramics, porcelain and natural stone finishes
- Technical layouts and setting out guides
- Trims, skirting and stair details
- CAD drawings for technical solutions and bespoke products
- PTV results, pendulum testing and slip resistance advice
- Specialist products to meet DDA regulations
- LRV testing and advice
- Surface preparation and installation material advice
- Underlays, membranes and movement control
- Underfloor heating guidance
- Fixing and installation guides
- Cleaning and maintenance guides

Our technical partners for adhesives, grouts, screeds, cleaning and maintenance products, trims, underlays, membranes, movement joints, and specialist installation equipment include Atrim, Dukkaboard, Validus, Raimondi and Vulcaseal.

At Pyro + Echo, we understand that our products are a small but important part of the overall solution. They are not stand alone, they are an element connected to a larger system. We recognise it requires high quality technical knowledge and experienced people to deliver complex technical solutions and ensure successful project results.

For more information contact our specification and technical team via email at studio@pyroandecho.com

PYRO + ECHO

COMBINED SYSTEM SOLUTIONS

Pyro + Echo is a brand of Trimline Group, established suppliers of full service tiling systems and solutions.

ATRIM
ENHANCE YOUR SPACE

ATRIM TILING & MOVEMENT PROFILES
Atrim offers a range of tiling trims for the protection and finishing of tiled edges, including a comprehensive selection of top quality profiles for retailers, contractors and specifiers that is second to none.

The professional range of tile trims, movement joints and stair nosings can be specified for large construction projects, including new-build housing, swimming pools and leisure complexes or shopping centres.

With Atrim you can enhance your space.

TECHNICAL

INSTALLATION + MAINTENANCE

Pyro + Echo recommend that all products are laid by qualified and trained professionals with proven experience, using appropriate tools and equipment.

The surface to be tiled must be rigid, sound, flat, clean and impermeable. Surfaces should also be chemically compatible with the chosen adhesive or mortar that has been selected to lay the tiles. Due to the low porosity of the products, the specified or supplied adhesive or mortar must be checked for suitability. High technical, mechanical and chemical specifications are desired.

Pyro + Echo strongly recommend that they are called to help with the specification of surface and preparation of it, the adhesive and grout composition and use of expansion joints etc.

All structural joints must be taken into account. Installers must include the required number of expansion and movement joints as set out by the relevant industry standards or body.

For optimal installation results, Pyro + Echo recommend the creation of a minimum of a 2/3mm grout joint or gap to simplify the laying and optimise the final effect. Pyro + Echo decline all responsibility where tiles are laid without joints.

Once the tiles have been grouted and any excess grout has been cleaned off, it is important to wait until the tiled surface is completely dry before commencing a final clean. Pyro + Echo recommend waiting a minimum of 5 days.

Newly tiled surfaces must be protected from water and damp whilst the adhesive, mortar and grout are curing. Finished tiles surfaces should be protected against any mechanical damage resulting from subsequent works by other professionals or later installations. Pyro + Echo recommend the use of protective sheeting and edge protection strips.

For the final clean of the tiled surface, any products used should be compatible with the chemical resistance of the tiles. Solid and abrasive detergents, scrubbers and scrapers must not be used to clean the tiled surface as these can cause irreversible damage to the tiles. The use of protective waxes, oils or similar products is not recommended.

Daily maintenance can be carried out using warm clean water, soft sponge, mop or cloth and a low alkaline based detergent or neutral soap if needed.

Pyro + Echo can provide further detailed installation and maintenance advice, please visit pyroandecho.com
